

Thodar

From the Tamil word for "to continue, to follow through"

One follow-up thread for every mother and baby, from the first antenatal visit to the child's second birthday.

WORKING PROTOTYPE · TAMIL & ENGLISH · BUILT ON SARVAM AI

Doctors set the plan. Thodar makes sure it happens.

TEAM HIGHEST IN THE ROOM

Dr Sughapriya V. C · Paediatrician, clinical lead

Maadhav V H · Team lead, technical lead

Sachin A S · Nakul T · Nishanth R S · Engineering

THE PROBLEM

Families start care. They don't stay.

INDIA • PREGNANCY

INDIA • CHILDREN AGED 12–23 MONTHS

Even Tamil Nadu is slipping

NFHS-5 → NFHS-6

4+ antenatal visits

90.6% → 87.6%

Fully vaccinated

90.4% → 89.7%

And the drop is urban: 86.2% of urban mothers complete 4 visits vs 88.6% rural.

WHY IT HAPPENS

The thread breaks at birth.

records split here

PREGNANCY · OBSTETRICS

4+ ANC visits, scans and tests

Tracked in the OB file, the ANC register and a staff spreadsheet.

32.9%

of missed vaccines: nobody reminded the family

BIRTH TO 6 WEEKS · HANDOVER

PNC at 48 h, day 7, week 6 + birth doses

Mother's file stays in obstetrics. Baby's file starts in paediatrics. Nobody owns both.

26.6%

of missed vaccines: the mother simply forgot

6 WEEKS TO 2 YEARS · PAEDIATRICS

Vaccines at 6, 10, 14 weeks, 9 and 16–24 months

Tracked on the child's card and the immunisation register.

34.8%

of measles doses in India are given late

One thread per mother–baby pair.

Sits beside PICME, JANANI and U-WIN: imports their exports and covers the hospitals and clinics their field-worker due lists don't reach.

THE PRODUCT

A nurse's morning, in one list.

Today · Postnatal & well-baby clinic

4 need action

Who	What is due	Status	Next step
Kavitha R.	ANC visit 3	9 days overdue · 2 calls unanswered	Ask VHN to visit
Meena K.	PNC, day 7	3 days overdue · asked to reschedule	Booked Sat 10:30
Baby of Priya S.	Penta-2 (10 wk)	Due today · confirmed on WhatsApp	Expect at OPD
Baby of Anitha M.	MR-1 (9 mo)	Due in 3 days · reminder sent	Voice call Thu if no reply

Sorted by days overdue. Every action is logged, so the next person sees the history.

WHATSAPP · SENT IN TAMIL

Hello Meena! On Wednesday 07-10 at the hospital, in one visit:

- your check-up after delivery
- your baby's newborn check-up

Confirm

Reschedule

Voice note · 0:07

"Can't come today, I'll come on Saturday."

Transcribed live by Saaras v3. Both visits move to Saturday.

Doctors set the plan. Thodar makes sure it happens.

No diagnosis

No risk scores

No reading of results

No medical advice

AI only reads paper and talks to families. Due dates and order come from fixed rules. Every reply passes two locks, rules and a model: if either sees a health concern, a nurse calls.

FEASIBILITY · BUILT ON SARVAM AI, THE EVENT'S TECHNOLOGY PARTNER

AI at the edges. Rules at the core.

AI · READS PAPER

Sarvam Vision

Photos of registers and mother–child cards become rows. A nurse confirms every row before it is saved.

FIXED RULES · NO AI

Thodar core

ANC, PNC and UIP schedules as versioned rules. Splink record linking. FastAPI, PostgreSQL, Next.js web app.

AI · TALKS TO FAMILIES

Sarvam Voice Agents + WhatsApp

Saaras v3, Sarvam-105B and Bulbul v3 on Exotel. WhatsApp Cloud API buttons; Saaras transcribes voice notes.

≈ ₹2–3

per due visit: two WhatsApp nudges plus one short call (estimate at list prices)

In India

AWS Mumbai plus Sarvam's India-hosted models. Consent and opt-out under the DPDP Act.

Live-tested

Tamil voice notes transcribed word for word in under 1 s; a register page read in 9.5 s.

Built to the brief. Measurable in 90 days.

The brief asks for	Thodar delivers
Early identification of who needs follow-up	A morning list of due and overdue visits, before a miss becomes a dropout
Visibility across fragmented records	One thread built from registers, Excel, HIS exports and paper photos
Coordinated follow-up across teams	The obstetrics-to-paediatrics handover has an owner; the family decision-maker is reminded too
Simpler workflows in existing settings	No new data entry; one message per family per clinic day, mother and baby together
Assistive, not diagnostic	No diagnosis, scores or advice; consent, export and erasure (DPDP)

90-day pilot measures

- Families brought back into care
- ANC visits attended on time
- PNC done at 48 h and day 7
- Vaccine doses on time, 6 wk to 9 mo
- Staff hours a week spent chasing
